

COSC1226 - Real Time Rendering - Assignment 2

WHAT TO ADD NEXT?
PA LEVEL

- Drawing the table:
- Block object class
 - Make Cube a specialisation
 - Multiple Objects
 - Keep coordinates in local object space
 - Object Position
 - Object Transform Matrix

- Lights + Diffuse and Specular Maps
- Add some lights to the scene
 - Extend Material class
 - Texture Loading
 - Extend Object class
 - Texture the table

- Sphere class for the Ball
- Which class will it inherit from?
 - Draw a ball at its starting position.

- SkyBox
- Find 6 image skybox that you like
 - Create copies with numbers on each img
 - Get it working then use numberless img

- A simple "Level" or "World" class
- Move Objects[] out of MainApp
 - Add light definitions to Level
 - Move SkyBox setup/config into Level
 - Add Level instance to MainApp
 - Optional, load Level from file

- Movement
- Differentiate between static and moving objects?
 - Add Velocity support
 - Press a key to give the ball some velocity and start animating it

- Collisions
- Bounding Volume base class
 - Subclasses
 - Add to Object
 - Simple naive collisions against all objects
 - Collision response

*** You have a ball bouncing around the table ***

Add Pegs, Bumpers, Flippers

Play around with Velocity and Acceleration settings.

Add Uniform Grid support for Stationery objects.

Everything will be easy from this point onwards !!!!! really.

OTHER

- Split UpdateState() up into separate class - RTRPhysicsEngine
- Split RenderFrame() out into separate class - RTRRenderer.
- Add instance of each to MainApp.
- Instead of one or two concrete Shaders in MainApp, maintain a list of them in RTRRenderer.
- Sort object render order by Shader.
